

**Here's All the information you need**

**What is Fibre to the Home (FTTH)?**

FTTH is a new technology that uses fibre optic cable instead of copper cable to deliver Voice Video & Data all the way to the last mile to your home.

**How will FTTH Benefit me?**

By upgrading to FTTH you will receive a passive connection to your home which also means that you will experience much better service continuity and high priority service attendance in case of any interruptions

**What is an ONU?**

An ONU (Optical Network Unit) is a generic term denoting a device that converts Optical signals transmitted via fibre to a usable electrical signals for voice, video & data services

**How Much will this cost me?**

CTV has already invested in building 300 KM of METRO Optical Fibre Infrastructure and is ready to deliver FTTH at the following cost:

1. One off Setup Fee	\$500.00
2. Monthly Subscription	\$350.00

**What Services are Included**

When you subscribe to FTTH Service you get the full Bundled service that includes:

1. high-speed Broadband Internet with up to 4 mbps bandwidth that will enable high quality VoIP Calls
2. Digital Cable TV service that includes over 180 high quality programs and High Definition HD channels with PVR facility

TV Content Type included	No of Channels

Fiber to the home (FTTH) is the ideal fiber-optics architecture. Fiber Optic service to the home is the fastest, most reliable and secure method and far surpasses anything that Broadband or "wireless" could ever even dream of. This is the only way such vast amounts of data can be transported from caller to caller - quickly and securely.

There are several advantages associated with Fiber To The Home -FTTH, including the following: It is a passive network, so there are no active components from the CO- or central office to the end user. This dramatically minimizes the network downtime and each user is independent of power.

FTTH offers the highest available bandwidth of any technology, in both downstream (from the internet to the end-user) and upstream (from the user to the internet) directions.

Speed Really Matters
